

Wyndham Harbour

Wyndham Harbour is situated within the flat plains of Werribee South adjacent to Port Phillip Bay

The landscape concept aims to provide a locally appropriate and environmentally sustainable response to the proposed development. Exclusively native and indigenous planting contribute to the high quality of design for the public and residents whilst encouraging indigenous fauna to the site.

Appropriate planting along streets and in yards and the indigenous planted dune system will contribute to favourable views to and from the Bay. Valuable indigenous remnant vegetation will be reinforced and protected, while the wetland and open

space areas to the north of the site enable the generation of indigenous and native flora and fauna habitats while additionally contributing to an ecologically sustainable water treatment program.

A contextually appropriate landscape treatment helps to create and maintain a landscape for the site that is locally responsive and appealing to people and beneficial to the environment alike
